

Naive Lie Theory 4.1 Exercises

OblivionIsTheName

March 2026

Notes

To be honest, I don't know how to understand this chapter. Many things are undefined, and the descriptions of "tangent" are (at least for me) hard to understand without prior knowledge. The exercises are all standard combinatorial or binomial coefficient theorems. I don't know what does he mean by "object" and what operation is defined on A and B , therefore I don't know how to write a proper proof without just copying standard binomial theorems and replacing the variables by A and B .
